# ANNEX 1: Statement of the Head of Department in charge of Risk Management and Internal Control

"I declare that in accordance with the Commission's communication on the internal control framework, I have reported my advice and recommendations on the overall state of internal control in the Executive Agency to the Executive Director.

I hereby certify that the information provided in the present Annual Activity Report and in its annexes is, to the best of my knowledge, accurate and complete."

Brussels, 31 March 2020

/e-signed/

Nathalie Stefanowicz

## COSME

| <ul> <li>To improve according of equity and continuous according or the competitiveness of the competitiveness</li></ul> | Parent DG: GROW  Related to spending programme COSME  Latest known result |  |   |
|--|---|--|---|
| Calls for proposals  | Number of calls<br>published  | 15 (12 from<br>2020 WP and 3<br>from the<br>previous WPs)                      | 15 (12 calls published from WP 2020 and 3 from WP 2019)   |
| Calls for tender   | Number of calls published   | 10 (7 from<br>2020 WP and 3<br>from the<br>previous WPs)                       | 14 (8 from WP 2020 and 6 from 2019)   |
| Final reports  | Number of final reports evaluated   | 200  | 179 grants (133 grants on CORDA +12 EDEN 2017 + 17 EDEN 2018 + 2 other Ad-hoc grants +15 payment ongoing) Covid-19 led to late submission of project reports and extensions of project durations. |
| Evaluation sessions  | Time to inform applicants   | 100% of applicants informed within 6 months (183 days) after the call deadline | 100%  |
|  | % of evaluated proposals challenged under the evaluation review procedure | Less than 3% of evaluated proposals  | 2.2%  |
|  | % of evaluated proposals re-evaluated following review requests           | Max. 0.5% of<br>evaluated<br>proposals   | 0%  |
| Grant agreements   | Number of grant<br>agreements<br>signed                                   | 180 (35-40<br>from 2020 WP<br>and 148 from<br>the previous<br>WPs)             | 148 (No grant agreements signed from WP2020). Some calls delayed due to late reception of call texts. These grant agreements will   |

|   |                                |   | be signed in 2021.  |
|---|--------------------------------|---|---|
|   | Time to grant                  | 100% of grapt   |   |
|   | Time to grant                  | 100% of grant<br>agreements<br>signed within 9<br>months (274<br>days) after the<br>call deadline | 93% (9 grant agreements signed beyond that target date). Delays were caused by necessity to complete linked amendment (to the FPA) or due to late submission of supporting evidence by beneficiaries. |
| Contracts   | Number of contracts signed     | 20 (estimated<br>5-10 from 2020<br>WP and 14 from<br>the previous<br>WPs)                         | 19 (6 from WP2020 + 13 from WP 2019). One call from 2019 was cancelled  |
| Payments  | Time to pay                    | 100% of payments within legal deadlines   | 100%  |
| Events  | Satisfaction rate participants | 80-85 <sup>2</sup> %  | 85% (EEN) 85% (Training sessions) 72% (Cluster conference) – last-minute changes in conference format due to Covid-19 affected the satisfaction rate.   |
| Applicants' feedback<br>on services provided<br>by the Agency <sup>3</sup>          | Satisfaction rate              | 62%   | 66.6%   |
| Beneficiaries'<br>feedback on services<br>provided by the<br>Agency <sup>4</sup>    | Satisfaction rate              | 85%   | 95%   |
| External experts'<br>feedback on services<br>provided by the<br>Agency <sup>5</sup> | Satisfaction rate              | 86%   | 94.1%   |
| Contractors'<br>feedback on service<br>provided by the<br>Agency <sup>6</sup>       | Satisfaction rate              | 67%   | 60% <sup>7</sup>  |

<sup>&</sup>lt;sup>7</sup> The team will analyse these results in detail to undersand why the target was not met and identify relevant follow up actions. From a preliminary reading of participants' comments, the reasons for these lower results seem to be linked to a need for faster replies, more consistent management of contracts and clarity of roles between EASME and partner DGs during the execution of the contract.

<sup>&</sup>lt;sup>8</sup> The table lists all calls (for proposals and open calls for tenders and FWC) published and/or with a deadline for submission in 2020, regardless of the year of adoption of the WP.

<sup>&</sup>lt;sup>9</sup> Publication dates are tentative and based on the ones scheduled in the WP.

<sup>&</sup>lt;sup>10</sup> To be read as: "date of submission of the proposal/offer".

<sup>&</sup>lt;sup>13</sup> Source: 2020 EASME client satisfaction survey Final report

<sup>&</sup>lt;sup>14</sup> The team will analyse these results in detail to undersand why the target was not met and identify relevant follow up actions. From a preliminary reading of participants' comments, the lower level of satisfaction seems to be partly linked to the difficulty in finding online information as well as a request for more guidance and access to good practice to understand what is expected. Respondents also called for a more direct helpdesk contact as well as less complex language and procedures.

#### EIC-pilot in action:

More than 45 events took place in 2020, adapted due to the Covid-19 pandemic to an online format and involving more than 700 EIC funded companies and projects.

Matching events like EIC Corporate and Investor Days offered exclusive business opportunities with partners like <u>AbinBev</u>, <u>Enel</u>, <u>BBVA& Ferrovial</u>, <u>Roche</u>, <u>Unilever</u>, <u>Evonik</u>, <u>BPI France</u>, <u>Euronext</u>, <u>European Space Agency</u>, <u>PKO Bank</u> Polski, <u>Thales</u>, <u>CaixaBank</u> and <u>Amadeus</u>. Each participating EIC company had on average three 1-to-1 meetings with business partners and 4 follow-up contacts. For the Corporate Days on average 26% of participating companies had a business follow up within 6 months after the event in a form of a deal or proof-of-concept with the Corporate.

In 2020 EIC beneficiaries benefitted from new services including:

**EIC Innovation Hub visits** to <u>Stockholm</u>, <u>Barcelona</u> and <u>Berlin</u> organised in cooperation with local partners aiming to submerge EIC companies and projects from around Europe in local innovation ecosystems and connect them with local startups, investors and corporates.

**EIC buyers activities** connected the EIC innovators with buyers looking to exploit deep tech innovations through early market consultation and thematic procurement scouting days. EASME piloted such activities with private buyers associated with German <u>BME association</u>, with <u>Bpost</u> and 2 pitching events with hospitals and other public actors in the domain of COVID-19

<u>EIC Planet.tech</u> offered enhanced cooperation with large corporates, giving innovators an opportunity to jointly devise innovative solutions to a number of pre-determined challenges in the field of sustainability.

The very first European '<u>Greenathon'</u>, which allowed EIC-innovators to co-create and pose solutions to real-life challenges from corporates like <u>Henkel dx Ventures</u>, <u>Saint-Gobain</u>, <u>Danfoss and ENGIE</u>.

**Specific activities for EIC Pathfinder beneficiaries**, included <u>Innovation training</u> <u>workshops</u> and <u>Corporate Pathfinder-initiative</u>: bridging the gap between research and industry and speeding up the development of EIC beneficiaries' technology.

A specific <u>EIC Investor Day for Women in Tech</u> connected EIC-supported companies led by women with investors where 12 innovative companies got to pitch in front of investors.

# Societal challenge 'Secure, clean and efficient energy'

<sup>&</sup>lt;sup>24</sup> Source:2020 EASME client satisfaction survey Final report .

<sup>&</sup>lt;sup>25</sup> The team will analyse these results in detail to undersand why the target was not met and identify relevant follow up actions. From a preliminary reading of participants' comments, the lower level of satisfaction seems to be partly linked to the difficulty in finding online information as well as a request for more guidance and access to good practice to understand what is expected. Respondents also called for a more direct helpdesk contact as well as less complex language and procedures.

<sup>&</sup>lt;sup>31</sup> The team will analyse these results in detail to undersand why the target was not met and identify relevant follow up actions. From a preliminary reading of participants' comments, the lower level of satisfaction seems to be partly linked to the difficulty in finding online information as well as a request for more guidance and access to good practice to understand what is expected. Respondents also called for a more direct helpdesk contact as well as less complex language and procedures.

#### Programme for the Environment and Climate Action (LIFE)

#### **Specific objectives:**

- Ensuring further development and ensuring a well-functioning EU carbon market, via the EU ETS, towards further reduction of GHG emissions by energy power and heat generation installations, by energy-intensive industries and by domestic aviation;
- A fair and operational framework for MS towards a further reduction of GHG emissions in the non-ETS sectors in the EU;
- Further decarbonisation of the transport sector in the EU through development and implementation of harmonised policies;
- Increased resilience of EU society against the effects of climate change via effective support to MS respecting the subsidiarity principle (adaptation);
- Optimisation and sound and efficient management of financial incentives to support the innovation-based shift towards a low carbon and climate-resilient EU economy;
- The EU economy is resource-efficient, green and competitive;
- The Union's natural capital is protected, conserved and enhanced;
- The Union's citizens are safeguarded from environment-related pressures and risks to health and well-being;
- There is an enabling framework for environmental policy, based on smart implementation, a strong knowledge and evidence base, investment, and improved environmental integration and policy coherence;
- The Union's cities are more sustainable;
- The Union is more effective in addressing international environmental challenges

<sup>&</sup>lt;sup>34</sup> Source: 2020 EASME client satisfaction survey Final report

<sup>&</sup>lt;sup>35</sup> The team will analyse these results in detail to undersand why the target was not met and identify relevant follow up actions. From a preliminary reading of participants' comments, the lower level of satisfaction seems to be partly linked to the difficulty in finding online information as well as a request for more guidance and access to good practice to understand what is expected. Respondents also called for a more direct helpdesk contact as well as less complex language and procedures.

| TOTAL   | 0                                       | 0          |

It should be noted that the balance sheet and statement of financial performance presented in Annex 3 to this Annual Activity Report, represent only the assets, flabilities, expenses and tevenues that are under the control of this Directorate General. Significant amounts such as own resource revenues and cash held in Commission bank accounts are not included in this Directorate General's accounts since they are managed centrally by DG Budget, on whose balance sheet and statement of financial performance they appear. Furthermore, since the accumulated result of the Commission is not split amongst the various Directorates General, it can be seen that the balance sheet presented here is not in equilibrium.

Additionally, the figures included in tables 4 and 5 are provisional since they are, at this date, still subject to audit by the Court of Auditors. It is thus possible that amounts included in these tables may have to be adjusted following this audit.

It should be noted that the belance sheet and statement of financial performance presented in Armain 3 to this Armaia Autivity Placent, represent only the scients, liabilities, expenses and neverties that are under the control of this Directorate General. Significant encounts such as own resource revenues and costs hald in Commission bank accounts are not included in the Directorate General's accounts since they are managed centrally by DG Budget, on whose believes sheet and statement of financial performance they appear. Furthermore, shop the accurrication result of the Commission is not split amongst the versions Directorates General, it can be seen that the features sheet presented here is not in equilibrium.

Additionally, the figures included in totales 4 and 5 are provisional since they are, at this case, still subject to avoid by the Court of Auditors, it is thus possible that amounts included in these tables may have to be adjusted following this audit.

| STATEMENT OF FINANCIAL PERFORMANCE           | 1,279,495,468 | 1,374,657,656  |

It should be noted that the balance sheet and statement of financial performance presented in Annex 3 to this Annual Activity Report, represent only the assets, liabilities, expenses and revenues that are under the control of this Directorate General. Significant amounts such as own resource revenues and cash held in Commission bank accounts are not included in this Directorate General's accounts since they are managed centrally by DG Budget, on whose balance sheet and statement of financial performance they appear. Furthermore, since the accountiated result of the Commission is not split amongst the various Directorates General, it can be seen that the balance sheet presented here is not in equilibrium.

Additionally, the figures included in tables 4 and 5 are provisional since they are, at this date, still subject to audit by the Court of Auditors. It is thus possible that amounts included in these tables may have to be adjusted following this audit.

### TABLE 5bis: OFF BALANCE SHEET for DG IEEA

TABLE 16: Commitments co-delegation type 3 in 2020 for DG IEEA

## **ANNEX 4: Financial Scorecard**

### **Executive Agency EASME**

The Annex 4 of each Commission service summarises the annual result of the standard financial indicators measurement. Annexed to the Annual Activity Report 2020, 6 standard financial indicators are presented below, each with its objective, category, definition, and result for the Commission service and for the EC as a whole (for benchmarking purposes)<sup>42</sup>:

- Commitment Appropriations (CA) Implementation
- CA Forecast Implementation
- Payment Appropriations (PA) Implementation
- PA Forecast Implementation
- Global Commitment Absorption
- Timely Payments

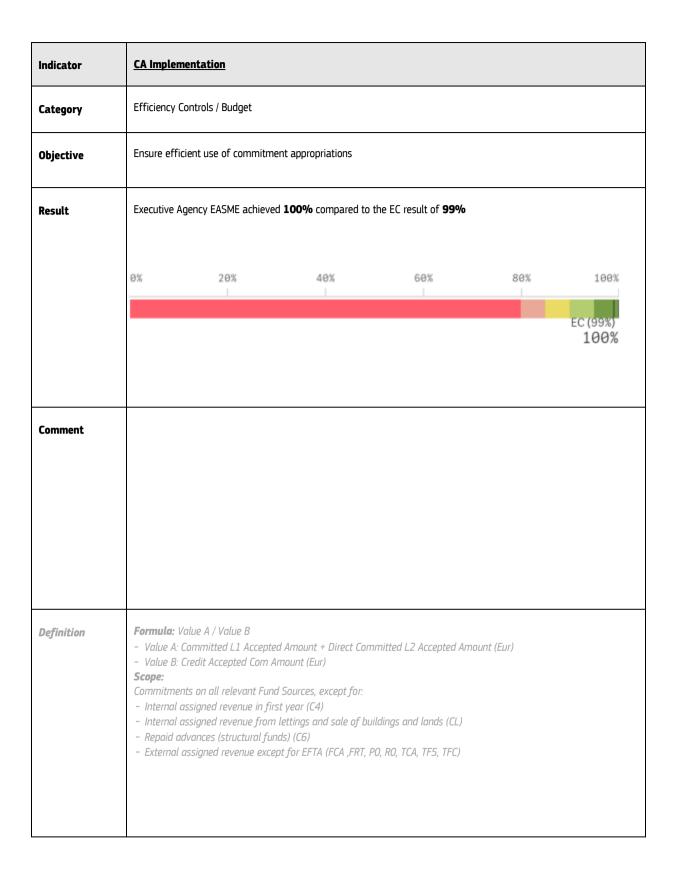

For each indicator, its value (in %) for the Commission service is compared to the common target (in %). The difference between the indicator's value and the target is colour coded as follows:

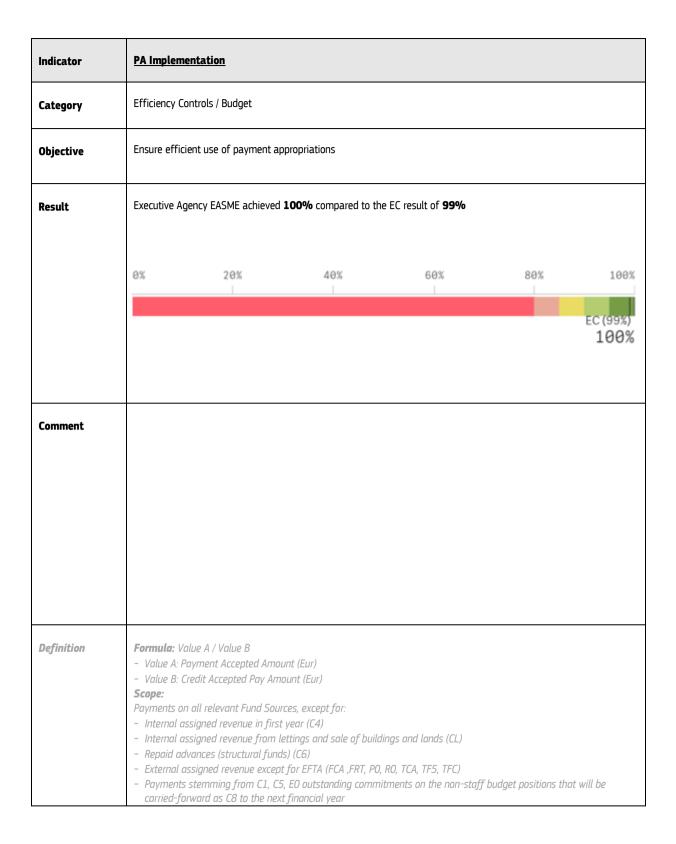

- 100 >95% of the target: dark green
- 95 >90% of the target: light green
- 90 >85% of the target: yellow
- 85 >80% of the target: light red
- 80 0% of the target: dark red

The Commission services are invited to provide commentary behind each indicator's result in the dedicated boxes below as this can help the reader to understand the Commission's service context. In cases when the indicator's value achieves 80% or less of the target, the comment becomes mandatory.

\_

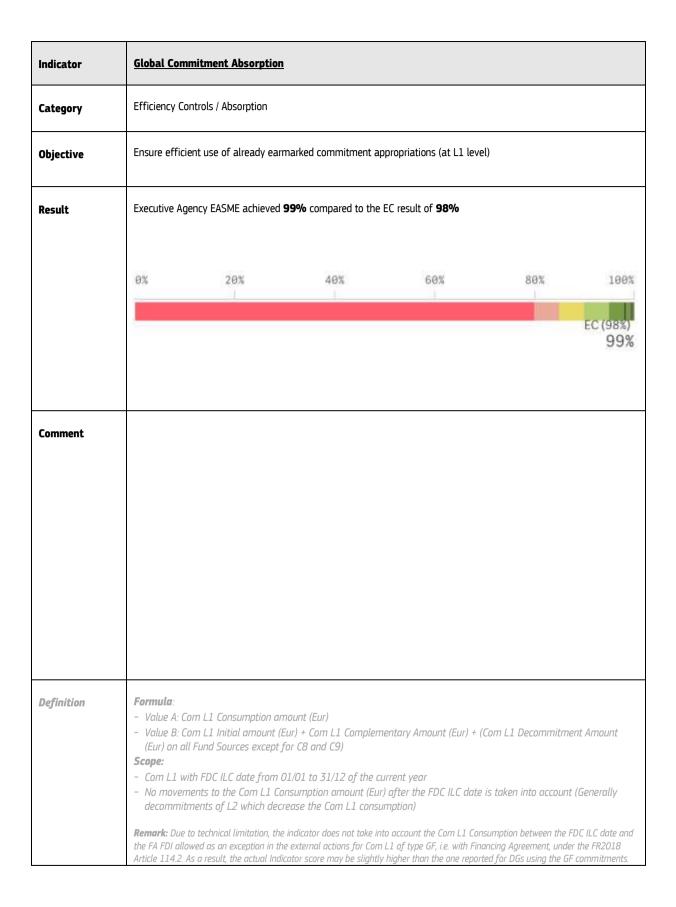

<sup>&</sup>lt;sup>42</sup> If the EC service did not perform any transaction in the area measured by the indicator or the information is not available in the central financial system, the indicator is not calculated (i.e. displayed as "-") in this Annex.

| Indicator  | CA Forecast Implementation  |
|------------|---|
| Category   | Efficiency Controls / Budget  |
| Objective  | Ensure the cumulative alignment of the commitment implementation with the commitment forecast in a financial year   |
| Result     | Executive Agency EASME achieved <b>64%</b> compared to the EC result of <b>98%</b>  |
|            | 0% 20% 40% 60% 80% 100%   |
|            | 64%<br>EC (98%)   |
| Comment    | The result of 64% for EASME comes from an excess of commitment execution compared to the forecast. Following the European Green Deal initiative, EASME has received an additional budget in commitment credits which results in a final overconsumption of 136% compared to the Commitment forecast for the year 2020.  |
| Definition | Formula: Value A / Value B*,**  - Value A: Committed L1 Accepted Amount + Direct Committed L2 Accepted Amount (Eur)  - Value B: Commitment Forecast Amount (Eur)  *if Value A / Value B between 100 and 200% then the result indicator will be equal to 1 – (ABS(Value B – Value A) / Value B)  **if Value A / Value B > 200 % then the result indicator will be equal to 0%  Scope:  - Commitments on all relevant Fund Sources  - Commitment Forecast Amount (Eur) from the most up to date forecast version (Initial Mar-Aug, Revised Sep-Dec) |

| Indicator  | PA Forecast   | <u>Implementation</u>   |  |   |                         |                 |
|------------|---|---|--|---|-------------------------|-----------------|

## **ANNEX 5: Materiality criteria**

EASME expenditure is composed of (in order of importance), directly managed grants (around 95%), procurement and experts. The error rate affecting the payments is estimated yearly, per programme, following a relevant methodology that takes into account the risk associated to the type of expenditure (in terms of probability and final financial impact).

The assessment of the effectiveness of the different programmes' control systems is based mainly, but not exclusively, on ex-post audits' results. The effectiveness is expressed in terms of detected and residual error rate. Please see below detailed explanations.

#### • COSME, LIFE and EMFF programmes:

For COSME, LIFE and EMFF programmes, the Agency's **quantitative materiality threshold** is set at a residual error rate of 2%, in application of the Commission's standard practice. In qualitative terms, the following factors are considered: nature and scope of any significant weaknesses, duration, compensatory measures such as mitigating controls, existence of corrective actions to correct any significant weaknesses.

The ex-post controls (audits) carried out by EASME are made on costs accepted after exante controls on interim and final financial statements submitted to the Agency. They consist of verifying the legality and regularity of the underlying transactions. The residual error risk is estimated per programme by the residual error rate: it is obtained from an examination of value-based audits<sup>43</sup> and calculated on a cumulative multi-annual basis, including all audit reports closed by the end of the reporting year. The detected error rate is extrapolated to the non-audited part of the payment population. For the audited population, EASME deducts any corrections made by implementing the audit results from the total amount of errors detected.

The residual error rate of each programme audited by EASME is the the residual error rate applied to the audited part and the error rate presumed to be affecting the non-audited part<sup>44</sup>. In view of the **multi-annual nature of its programmes**, EASME has built a multiannual ex-post audit strategy based on a multi-annual control strategy, whereby the detected and residual error rates are also multi-annual. The objectives of the EASME expost audit strategy are to provide assurance to management on sound financial management and on the legality and regularity of operational expenditure as well as to contribute to the improvement of the financial control systems for operational expenditure.

While this sampling is not deemed to be fully statistically representative, value-based audits are considered – in line with the guidelines of DG BUDG - to be a non-biased 'proxy', i.e. they are a random enough sample from which one is able to draw conclusions. Note that a sampling based on a purely random approach would bring a risk of insufficient coverage, thus affecting significantly the proper disclosure of the residual error rate for the un-audited population and the corrective capacity.

<sup>&</sup>lt;sup>44</sup> We consider that the part of payments remaining un-audited and un-corrected is affected by errors of the same magnitude of the representative detected error rate.

**EASME's Ex-Post Control strategy** is based on the following principles, intended to find an optimal balance between being (i) maximum-corrective, (ii) reasonably cost-effective and (iii) sufficiently close to random to allow drawing an assurance conclusion:

- 1. EASME's Ex Post Control Strategy covers the following programmes: 3 delegated programmes LIFE, COSME and EMFF covering the programing period 2014-2020<sup>45</sup>. For each programme, a sample (covering a range from 5% to 20%<sup>46</sup> of the programme's cumulative funding) is audited, the audit results are implemented (corrections made) and a cumulative residual error rate is calculated.
- 2. Taking into account the limited ex-post control resources, the ex-post control strategy aims to detect and correct the most significant errors (*amount in absolute terms*). In that respect, EASME focuses on value-based audits (aiming at cleaning the largest amounts and thus maximising assurance). This type of approach is considered more control-effective, resulting in higher returns on investment and having a dissuasive effect, as well as being cost-effective. For EASME's programmes' populations, based on our experience from managing the legacy programmes and to the best of our knowledge, there are no indications (at ex-post level<sup>47</sup>) for inherently higher error rates (*error in %*) in the larger participations, thus the value-based audits are considered to be a non-biased 'proxy' i.e. random enough to be able to draw conclusions from them.
- 3. Auditing a statistically representative or even a random sample would not be cost-effective, given that then rather small participations will also be sampled. With an expected detected error rate and thus potential correction of, say, 5% and a typical audit cost of, say, 11,500 EUR, participations audited should be in principle and if possible larger than 230,000 EUR. Furthermore, a 'stratified' approach would not be appropriate given that there appear to be no solid grounds for a clear segmentation of the programmes populations, based on distinct grant modalities, features, etc., and leading to 'distinctly' lower/higher risk profile segments (e.g. less than 2% and/or above 10%).
- 4. Although the Agency recognises that the above approach is not fully statistically representative, in line with DG BUDG guidance it is considered as the second-best alternative; as a 'proxy' to a fully representative or a random sample.
- 5. In addition to the value-based audits, the Agency performs to a limited extent risk-based audits of beneficiaries. This selection addresses specific concerns, risks or issues, detected and highlighted either by the financial or operational teams. Due to their specific nature, error rates of these "risk-based" audits are not included in the average random-proxy error rate calculation.

\_

<sup>&</sup>lt;sup>45</sup> Ex-post audits for H2020 are performed by the Common Support Centre (lead DG is RTD), through a Common Representative audit Sample (CRS). Please see section below.

<sup>&</sup>lt;sup>46</sup> Depending on the expected detected error rate and on the need for budget 'cleaning' to meet the RER control objective

<sup>&</sup>lt;sup>47</sup> i.e. after having applied differentiated ex-ante controls for the largest participations. For example, according to the grant vademecum, the certificate on the financial statements and underlying accounts is recommended a) grants for an action for which the amount awarded in the form referred to in Article 121(1)(a) of the Financial Regulation is EUR 750 000 or more, when the cumulative amounts of payment requests under that form is at least EUR 325 000. b) operating grants for which the amount awarded in the form referred to in Article 121(1)(a) of the Financial Regulation is EUR 100 000 or more.

- 6. Due to its multi-annual nature, the effectiveness of the ex-post control strategy can only be measured and assessed at the final stages in the lifecycle of each programme and once the ex-post audit strategy has been fully implemented. Notwithstanding the multiannual span of the control strategy, the Director of EASME is required to sign a statement of assurance for each financial reporting year. In order to determine whether to qualify this statement of assurance with a reservation, the effectiveness of the control systems in place needs to be assessed not only for the year of reference but also with a multiannual perspective, to determine whether it is possible to reasonably conclude that the control objectives will be met in the future as foreseen.
- 7. The criteria for making a decision on whether there is material error in the expenditure of the Agency, and so on whether to make a reservation in the AAR, will be principally, though not necessarily exclusively, based on the level of error identified in ex-post audits of cost claims on a multi-annual basis.
- 8. The question of being on track towards this objective is to be (re)assessed annually, in view of the results of the implementation of the ex-post audit strategy and taking into account both the frequency and importance of the errors found as well as a cost-benefit analysis of the effort needed to detect and correct them.

EASME's Ex-Post Audit Strategy for the delegated programmes of the Agency was issued on 22/02/2016. Building on the experience gathered until now on the implementation of the Ex-Post Audit Strategy, EASME revised it in 2020, in terms of audit coverage and closing targets (i.e. number of audit reports) and adapted the annual targets accordingly. The Ex-Post Audit Strategy is implemented in line with the advancement of the lifecycle of the projects.

## Revision of the calculation method following ECA and IAS recommendations for COSME, LIFE and EMFF programmes

The European Court of Auditors in its 2018 Annual Report and its review of the Commission's ex-post audits observed that the Commission's methodology for calculating the error rate leads to an understatement of the error rate, the extent of which cannot be quantified. The European Court of Auditors' finding also affects the methodology used by EASME to calculate error rates.

In response to these findings, EASME has adopted a new methodology in this report - in line with the Court's observations - to calculate the error rate on the current programmes.

In the previous approach, the detected error rate was calculated dividing the total errors by the costs accepted by EASME.

Following the European Court of Auditors' recommendation and instructions from Central Services, as from the 2019 AAR EASME has calculated, the detected error rates by dividing the total errors by the total costs tested during audit.

EASME recalculated the error rates from the beginning of the programmes for COSME, LIFE and EMFF, for all audit reports closed by the reporting date.

The impact of the transition to the new error rate calculation methodology is explained in annex 7.

#### • Horizon 2020

For H2020, ex-post controls are under the responsibility of the Common Audit Service (CAS). The CAS undertakes all Horizon 2020 audits, for all Horizon 2020 stakeholders, including EASME, ensuring a harmonised approach and also in ensuring that the audit burden on beneficiaries is minimised. The Common Audit Strategy was adopted on 22.02.2016.

The control system established for Horizon 2020 aims for a detected error rate ranging from 2% to 5% (as close as possible to 2%, after corrections). Consequently, this range has been considered in legislation as the control objective set for the framework programme.

## 1. Assessment of the effectiveness of controls

The assessment of the effectiveness of the control system is based mainly, but not exclusively, on ex-post audits' results. The effectiveness is expressed in terms of detected and residual error rate, calculated on a representative sample.

The starting point to determine the effectiveness of the controls in place is the cumulative level of error expressed as the percentage of errors in favour of the EC, detected by ex-post audits, measured with respect to the amounts accepted after ex-ante controls.

However, to take into account the impact of the ex-post controls, this error level is to be adjusted by subtracting:

- Errors detected corrected as a result of the implementation of audit conclusions.
- Errors corrected as a result of the extension of audit results to non-audited contracts with the same beneficiary.

This results in a residual error rate, which is calculated in accordance with the following formula:

$$\operatorname{Re} sER\% = \frac{(\operatorname{Re} pER\% * (P - A)) - (\operatorname{Re} pERsys\% * E)}{P}$$

where:

**ResER%** residual error rate, expressed as a percentage.

**RepER%** representative error rate, or error rate detected in the common representative sample, expressed as a percentage. The RepER% is composed of complementary portions reflecting the proportion of negative systematic and non-systematic errors detected. This rate is the same for all implementing entities, without prejudice to possibly individual detected error rates.

**RepERsys%** portion of the RepER% representing negative systematic errors, (expressed as a percentage). The RepERsys% is the same for all entities and it is calculated from the same set of results as the RepER%

- P total requested EC contribution (€) in the auditable population (i.e. all paid financial statements).
- **A** total requested EC contribution (€) as approved by financial officers of all audited financial statements. This will be collected from audit results.
- **E** total non-audited requested EC contribution (€) of all audited beneficiaries.

The Common Representative Sample (CRS) is the starting point for the calculation of the residual error rate. It is representative of the expenditure of each framework programme (FP) as a whole. Nevertheless, the Director of EASME must also take into account other information when considering if the overall residual error rate is a sufficient basis on which to draw a conclusion on assurance (or make a reservation) for specific segment(s) of Horizon 2020. This may include the results of other ex-post audits, ex-ante controls, risk assessments, audit reports from external or internal auditors, etc. All this information may be used in assessing the overall impact of a weakness and considering whether to make a reservation or not.

If the CRS results are not used as the basis for calculating the residual error rate this must be clearly disclosed in the AAR, along with details of why and how the final judgement was made.

In case a calculation of the residual error rate based on a representative sample is not possible for a FP for reasons not involving control deficiencies,<sup>48</sup> the consequences are to be assessed quantitatively by making a best estimate of the likely exposure for the reporting year based on all available information. The relative impact on the Declaration of Assurance would be then considered by analysing the available information on qualitative grounds and considering evidence from other sources and areas. This should be clearly explained in the AAR.

#### 2. Multi-annual approach

The Commission's central services' guidance relating to the quantitative materiality threshold refers to a percentage of the authorised payments of the reporting year of the ABB expenditure. However, the Guidance on AARs also allows a multi-annual approach, especially for budget areas (e.g. programmes) for which a multi-annual control system is more effective. In such cases, the calculation of errors, corrections and materiality of the residual amount at risk should be done on a "cumulative basis" on the basis of the totals over the entire programme lifecycle.

Because of its multiannual nature, the effectiveness of the Research and Innovation family services' control strategy can only be fully measured and assessed at the final stages in the life of the framework programme, once the ex-post audit strategy has been fully implemented and systematic errors have been detected and corrected.

In addition, basing materiality solely on ABB expenditure for one year may not provide the most appropriate basis for judgements, as ABB expenditure often includes significant levels of pre-financing expenditure (e.g. during the initial years of a new generation of programmes), as well as reimbursements (interim and final payments) based on cost

-

<sup>48</sup> Such as, for instance, when the number of results from a statistically-representative sample collected at a given point in time is not sufficient to calculate a reliable error rate.

claims that 'clear' those pre-financings. Pre-financing expenditure is very low risk, being paid automatically after the signing of the contract with the beneficiary.

Notwithstanding the multiannual span of their control strategy, Directors-General of the Research DGs (and the Directors of ERCEA, REA, and, for Horizon 2020, EASME and INEA) are required to sign a statement of assurance for each financial reporting year. In order to determine whether to qualify this statement of assurance with a reservation, the effectiveness of the control systems in place needs to be assessed not only for the year of reference but also with a multiannual perspective, to determine whether it is possible to reasonably conclude that the control objectives will be met in the future as foreseen.

In view of the crucial role of ex-post audits defined in the respective common audit strategies, this assessment needs to check in particular whether the scope and results of the ex-post audits carried out until the end of the reporting period are sufficient and adequate to meet the multiannual control strategy goals.

The criteria for making a decision on whether there is material error in the expenditure of the DG or service, and so on whether to make a reservation in the AAR, will therefore be principally, though not necessarily exclusively, based on the level of error identified in expost audits of cost claims on a multi-annual basis.

## 3. Adequacy of the audit scope

The quantity of the (cumulative) audit effort carried out until the end of each year is measured by the actual volume of audits completed. The data is to be shown per year and cumulated, in line with the current AAR presentation of error rates. The multiannual planning and results should be reported in sufficient detail to allow the reader to form an opinion on whether the strategy is on course as foreseen.

The Director of EASME should form a qualitative opinion to determine whether deviations from the multiannual plan are of such significance that they seriously endanger the achievement of the internal control objective. In such case, she or he would be expected to qualify his annual statement of assurance with a reservation.

The question of being on track towards this objective is to be (re)assessed annually, in view of the results of the implementation of the ex-post audit strategy and taking into account both the frequency and importance of the errors found as well as a cost-benefit analysis of the effort needed to detect and correct them.

## 4. 2020 revised methodology for the calculation of the error rate for Horizon 2020

The European Court of Auditors observed in its 2018 and 2019 Annual Reports that the error rate of Horizon 2020 was understated because "the ex-post audits aim for maximum coverage of the accepted costs, but rarely cover all the costs. The error rate is calculated as a share of all the accepted costs, instead of the amount actually audited. This means that the denominator in the error calculation is higher, so the error rate is understated. In case the errors found are of a systemic nature, the error is extrapolated which partially compensates for the above-mentioned understatement. However, since extrapolation is not performed for non-systemic errors, the overall error rate is nevertheless understated. The understatement of the error rate cannot be quantified. It is, then, impossible to determine whether the impact of this understatement is significant".

In response to this observation, in 2020 the Commission re-defined its methodology for calculating the Horizon 2020 error rate. In order to quantify any potential understatement mentioned by the Court, the Commission applied a new methodology for all audits closed as from 01 January 2020. The main change in the methodology is that, the denominator used in the error calculation is the sum of costs actually audited and not the sum of all accepted costs.

The additional 0,41 % (calculated on 790 H2020 audit participations by difference with the previous methodology) has been used to top up the detected error rate for 2020 calculated according to the methodology used in the past.

The IAS has carried out a limited review on the methodology for calculation of the error rates of Horizon 2020 in year 2020. The preliminary findings of this limited review confirmed that there is no weakness in the calculation of the detected error rate and that the impact of these findings on the accuracy of the calculation of the residual error rate is minor. The final recommendations of this limited review will be implemented in the AAR 2021

## 5. Horizon 2020 – Specific issues

The Commission's proposal for the Regulation establishing H2020 framework programme<sup>49</sup> states that

It remains the ultimate objective of the Commission to achieve a residual error rate of less than 2% of total expenditure over the lifetime of the programme, and to that end, it has introduced a number of simplification measures. However, other objectives such as the attractiveness and the success of the EU research policy, international competitiveness, scientific excellence and in particular, the costs of controls need to be considered.

Taking these elements in balance, it is proposed that the Directorates General charged with the implementation of the research and innovation budget will establish a cost-effective internal control system that will give reasonable assurance that the risk of error over the course of the multiannual expenditure period is, on an annual basis, within a range of 2-5 %, with the ultimate aim to achieve a residual level of error as close as possible to 2 % at the closure of the multi-annual programmes, once the financial impact of all audits, correction and recovery measures have been taken into account.

Further, it explains also that

Horizon 2020 introduces a significant number of important simplification measures that will lower the error rate in all the categories of error. However, [...] the continuation of a funding model based on the reimbursement of actual costs is the favoured option. A systematic resort to output based funding, flat rates or lump sums appears premature at this stage [...]. Retaining a system based on the reimbursement of actual costs does however mean that errors will continue to occur.

An analysis of errors identified during audits of the Seventh Framework Programme (FP7) suggests that around 25-35 % of them would be avoided by the simplification measures

<sup>&</sup>lt;sup>49</sup> COM(2011) 809/3 Proposal for a Regulation of the European Parliament and of the Council establishing Horizon 2020 – the Framework programme for Research and Innovation (2014-2020), see point 2.2, pp 98-102.

proposed. The error rate can then be expected to fall by 1.5 %, i.e. from close to 5 % to around 3.5 %, a figure that is referred to in the Commission Communication striking the right balance between the administrative costs of control and the risk of error.

The Commission considers therefore that, for research spending under Horizon 2020, a risk of error, on an annual basis, within a range between 2-5 % is a realistic objective taking into account the costs of controls, the simplification measures proposed to reduce the complexity of rules and the related inherent risk associated to the reimbursement of costs of the research project. The ultimate aim for the residual level of error at the closure of the programmes after the financial impact of all audits, correction and recovery measures will have been taken into account is to achieve a level as close as possible to 2 %.

In summary, the control system established for Horizon 2020 is designed to achieve a control result in a range of 2-5% detected error rate, which should be as close as possible to 2%, after corrections. Consequently, this range has been considered in the legislation as the control objective set for the framework programme.

The question of being on track towards this objective is to be (re)assessed annually, in view of the results of the implementation of the ex-post audit strategy and taking into account both the frequency and importance of the errors found as well as a cost-benefit analysis of the effort needed to detect and correct them.

## • De minimis threshold for financial reservation

Since 2019, a 'de minimis' threshold for financial reservations is introduced. Quantified AAR reservations related to residual error rates above the 2% materiality threshold, are deemed not substantial for segments representing less than 5% of the Agency's total payments and with a financial impact below EUR 5 million. In such cases, quantified reservations are no longer needed.

# ANNEX 6: Relevant Control System(s) for budget implementation (RCSs)

Stage 1: Programming, evaluation and selection of proposals

A - Preparation, adoption and publication of the Annual Work Programme and Calls for proposals

**Main internal control objectives:** Ensuring that the Agency selects the proposals that contribute the most towards the achievement of the policy or programme objectives (effectiveness); compliance (legality & regularity); prevention of fraud.

| Main risks<br>It may happen (again)<br>that  | Mitigating controls  | Coverage, frequency and depth of controls   | Cost-Effectiveness indicators (three E's)  |
|--|--|---|--|
| The Calls for proposals do not adequately reflect the policy objectives, priorities, are incoherent and/or the essential eligibility, selection and award criteria are not adequate to ensure the evaluation of the proposals. | <ul> <li>The Call for Proposals is based on the annual Work Programme adopted by the Commission and elaborated in cooperation with the parent DGs</li> <li>Hierarchical validation within the authorising department</li> <li>Inter-service consultation, including all relevant DGs</li> <li>Explicit allocation of responsibilities, approval of the call text by the AOD</li> </ul> | Coverage/Frequency: 100%  Depth: All Work Programmes are thoroughly reviewed at all levels, including for operational and legal aspects and adopted by the EC | • % of number of Calls successfully concluded/number of Calls planned in the Annual Work Programme • % of budget value implemented/budget allocated (commitments from Calls)  Economy:  Estimation of cost of staff involved in the preparation and the validation of the Annual Work Programme and the calls.  Costs are measured for stage 1 globally (phase A + B). Globally 15% of staff costs are dedicated to stage 1 programming, evaluation and selection. |

**Stage 1:** Programming, evaluation and selection of proposals

B -Selecting and awarding: Evaluation, ranking and selection of proposals

**Main internal control objectives:** Ensuring that the most promising projects for meeting the policy objectives are among (a good balance of) the proposals selected (effectiveness);

| Main risks<br>It may happen (again)   | Mitigating controls  | Coverage, frequency and depth of controls   | Cost-Effectiveness indicators (three E's)  |
|---|--|---|--|
| <ul> <li>The evaluation, ranking and selection of proposals is not carried out in accordance with the established procedures, the policy objectives, priorities and/or the essential eligibility, or with the selection and award criteria defined in the annual work programme and subsequent Calls for proposals.</li> <li>Risk of poor quality of selected proposals reducing the effectiveness of the programmes because:</li> <li>the procedure for awarding grants is quite complex with regard to compliance with the legal requirements</li> <li>only projects of good quality ensuring a high impact of the EU programmes should be funded while avoiding double financing of the same subsidised action.</li> <li>The applicant might not have stable and sufficient sources of funding to maintain his activity throughout the period during which the action is being carried out or the year for which the grant is awarded and to participate in its funding</li> </ul> | <ul> <li>The evaluation of proposals is supported by external experts: each proposal is evaluated by at least two experts who work independently from each other</li> <li>All persons involved in an evaluation sign a declaration of absence of conflict of interest prior to the start of the evaluation work</li> <li>Hierarchical validation by the AOD of ranked list of proposals</li> <li>During the selection procedure: the eligibility, exclusion, selection and award criteria are checked;</li> <li>Consultation with other DGs and colleagues in the Agency on special cases concerning potential overlaps with ongoing projects, technical opinion, etc.</li> <li>A consultation (ISC) on the ranking list of the selected proposals is launched by the AOSD to prevent double funding of the same project</li> <li>Redress procedure - allowing an applicant, who considers that a procedural act by an authorising officer adversely affects its rights, to challenge the act</li> </ul> | <ul> <li>100% of proposals are evaluated</li> <li>100% vetting of experts for technical expertise and independence (e.g. conflicts of interests, nationality bias, exemployer bias, collusion)</li> <li>100% of ranked list of proposals. Supervision of work of the evaluators</li> <li>100% of ranked list of proposals validated by the AOD</li> <li>100% of ranked list of proposals sent for ISC with parent DGs</li> <li>100% of contested decisions are analysed by a redress committee</li> </ul> | • Success rate: number of selected (funded) proposals/number of eligible proposals • % of review requests leading to a reevaluation/total number of evaluated proposals  Efficiency:  For all programmes the average time-to-inform results demonstrate a faster response to the applicants then the scheduled target.  Economy:  Estimation of cost of staff involved in evaluation, ranking and selection of proposals.  Costs are measured for stage 1 globally (phase A + B). Globally 15% of staff costs are dedicated to stage 1 programming, evaluation and selection.  For H2020 stage 1B is handled by REA. |

Stage 2: Contracting: Transformation of selected proposals into legally binding grant agreements

**Main internal control objectives**: Ensuring that the most promising projects for meeting the policy objectives are among the proposals contracted; optimal allocation of actions and funds allocation (best value for public money; effectiveness, economy, efficiency); compliance (legality & regularity); prevention of fraud

| Main risks  |   |  |  |

## ANNEX 7: Specific annexes related to "Financial Management"

#### Section 2.1.1 - Control results. Additional information.

## Reporting requirements relating to the 2018 Financial Regulation

- EASME had no cases of 'confirmation of instructions' in 2020.
- There are no cases of financing not linked to costs (2018 FR art 125.3)
- There have not been any cases of **flat rates >7% for indirect costs in 2020**<sup>51</sup> According to Horizon 2020 Rules for Participation, indirect eligible costs of Horizon 2020 grants are determined by applying a flat rate of 25% of the total direct eligible costs. It is the basic act that derogates from the Financial Regulation. This applies to all Horizon 2020 grants, although in some cases the 25 % could be directly embedded within a unit cost (e.g. unit cost for clinical studies). In certain cases, the indirect costs are included within a larger unit cost or lump sum (e.g., SME instrument Phase 1). In such cases, the percentage of indirect costs cannot be determined separately.
- One grant agreement (EMFF) signed in 2020 derogated from the principle of nonretroactivity pursuant to Article 193 of the Financial Regulation. Derogation was exceptionally agreed due to an urgent operational need to support EU Member States' implementation of maritime plans.
- There are no **Financial Framework Partnerships with a duration of more than 4 years**<sup>52</sup> which entered into force during the reporting year 2020.

#### 1. Effectiveness = the control results and benefits

## • Legality and regularity of the transactions

The programmes managed by EASME are implemented under the direct management scheme, which entails direct financial contributions through cofinanced contracts signed with external parties. To have reasonable assurance that the payments authorised are accurate and compliant with the applicable contractual provisions, EASME carries out exante and ex-post controls. The ex post control strategy contribute to the legality and regularity of expenditure on a multi-annual basis by systematically detecting and correcting errors made by beneficiaries in the reporting phase. These elements complement the exante controls embedded in EASME's programme management processes.

## LIFE, EMFF and COSME (2014-2020)

-

<sup>&</sup>lt;sup>50</sup> new FR art 92.3

<sup>&</sup>lt;sup>51</sup> new FR art 181.6

<sup>&</sup>lt;sup>52</sup> new FR art 130.4

EASME's multi-annual Ex-Post Strategy covers the period 2016-2024. It was revised in 2020 to assess if the results after three years were in line with the assumptions made when defining the strategy. The review focused on the update of the audit coverage and closing targets of the ongoing programmes COSME, LIFE and EMFF. Due to its multi-annual nature, the effectiveness of the strategy can only be measured and assessed fully in the final stages of the programmes managed by EASME, once the ex-post control strategy has been fully implemented and errors have been detected and corrected.

It should be noted that fieldwork of the audits issued in 2020 took place in 2019, before the Covid-19 pandemic related travel restrictions. As a result, the conduct of these audits were not hindered by the Covid-19 pandemic and could take place at beneficiaries' premises, with access to the supporting documents and internal control systems.

Table 1: Multi-annual Residual Error rates per programme audited by EASME (COSME, EMFF and LIFE)

#### COSME

The COSME programme is composed of Enterprise Europe Network actions (EEN) and COSME actions, the latter representing one third of the COSME programme budget. The sampling applied by EASME on a multi-annual basis reflects this distribution.

Audits of the COSME programme started in 2017. In 2018, following the results of the first audit campaign on 12 audits on COSME Action grants, the residual error rate was estimated at 5,45%. Although these results gave only a preliminary indication, at the early stages of the programme, of the error rate of the COSME programme as a whole, a reservation was issued, as the materiality threshold of 2% was exceeded.

In 2019, the audit sample was broadened by including COSME Network grants and reflected more accurately the programme overall<sup>53</sup>. The multiannual residual error rate at programme level decreased down to 1,59% at the end of 2019. Consequently, the reservation was lifted, as the multi-annual residual error rate was below the materiality threshold of 2%.

In 2020, the results of the third audit campaign, reflecting the distribution at programme level and including both COSME Actions and COSME Network became available<sup>54</sup>. By the end of 2020, on a cumulative basis, EASME issued 77 final audit reports at programme level. At this stage, the multi annual residual error rate has risen to 2,96%.

Following guidance from Central Services, as of the AAR 2019, EASME has calculated the COSME detected error rate against the sampled costs as a denominator rather than the full value of audited financial statements (as in AARs prior to 2019). The main impact of the change to the error rate calculation methodology leads to an increase in detected and residual error rates. Had the previous calculation methodology been applied, the residual error would have been lower, but still above the 2% materiality threshold (at 2,27%).

Most of the ex post findings relate to incorrect calculation of personnel costs and lack of supporting documents to substantiate the costs incurred.

This residual error rate above the materiality threshold is mainly due to inherent characteristics of the programme including:

- the set of eligibility rules (based on the reimbursement of actual eligible costs declared by the beneficiaries) as laid down in the basic act is not always fit for all types of beneficiaries; the profile of some beneficiaries of the programme such as "one-time beneficiaries" which are not used to EU funding rules, beneficiaries located in third countries with limited knowledge of EU rules, and small entities which do not have a robust financial management system in place:
- changes introduced by the current MFF (hourly rates were calculated based on 2 years period in the past while now they are to be calculated on financial years) were not updated in the cost reporting of beneficiaries with a lot of experience in EU funds
- ex-ante controls within the COSME programme, similarly to Horizon 2020 ones, have been designed to strike a balance between a trust-based approach and a full-scale set of controls. This type of design of ex-ante controls did not allow the erroneous payments to be sufficiently prevented, detected and corrected.

Given the results of these audits related to the COSME programme, the cumulative residual error rate at the year-end is estimated to be above the materiality threshold of 2%

<sup>&</sup>lt;sup>53</sup> The auditable population was distributed as follows in financial terms, on a cumulative basis, at the end of 2019: 72% COSME Network and 28% COSME Actions. The audited amounts are in line and are distributed as follows: 67% of the audited amount related to EEN actions and 33% COSME grants.

The auditable population was distributed as follows in financial terms, on a cumulative basis, at the end of 2020: 75% COSME Network and 25% COSME actions. The audited amounts are in line, reflecting this distribution as follows: 71% of COSME Network and 29% COSME Actions.

expected for the multi-annual period<sup>55</sup>. However, this error rate must be treated with caution, the nature of expenditure audited in the first years of the programme may not be totally representative of the expenditure across the whole period of expenditure.

Since COSME is a multi-annual programme, the error rates, and especially the residual error rate, should be considered within a time perspective. Specifically, the cleaning effect of audits will tend to increase the difference between the cumulative detected error rate and the cumulative residual error rate, with the latter finishing at a lower value.

In light of the above results, an assessment of the need to report a reservation in AAR was made. The relevant payments of COSME grants in 2020 represents 7,96% of the total operational expenditure. Since this programme does not meet the cumulative criteria to fall below the 'de minimis rule<sup>56</sup>', the Agency issues a reservation for the COSME programme.

Details of the corrective action plan are shown in Section 2.1.5 Declaration of Assurance and reservations.

#### LIFE

Audits of LIFE started in 2017. By the end of 2020, there are 20 final audits reports issued, related to both Action and Operating grants. Following guidance from the Central Services and as of AAR 2019, EASME has calculated the LIFE detected error rate against the sampled costs as a denominator rather than the full value of audited financial statements, as in AARs prior to 2019.

The main impact of the change to the error rate calculation methodology leads to an increase in detected and residual error rates.

This leads to an estimated multiannual residual error rate of 0,37 % at the end of 2020. However, the residual error rate calculation appears to be well contained within the materiality threshold of 2%. In 2020, the results of the first audits of LIFE Action grants, became available; they are consistent with the results reported for LIFE Operating grants in previous years. These results confirm the effectiveness of the current ex-ante control system of LIFE programme as such.

In addition, 17 new audits on LIFE programme were launched in March 2020 and one joint audit, with the Common Audit Service with in house resources, was launched for a beneficiary receiving both H2020 and LIFE funds. These audits are expected to be finalised in 2021.

#### **EMFF**

.

For Horizon 2020, the threshold is set within a range of 2-5 %, with the ultimate aim to achieve a residual level of error as close as possible to 2 % at the closure of the multi-annual programmes

<sup>&</sup>lt;sup>56</sup> According to DG BUDG guidelines, since 2019, quantified reservations related to residual error rates above the 2% materiality threshold, are deemed not substantial for segments representing less than 5% of the Agency's total payments and with a financial impact below EUR 5 million. In such cases, reservations in AAR are no longer needed.

Audits of EMFF started in January 2019. By the end of 2020, ten audit reports have been issued. Following guidance from the Central Services and as of AAR 2019, EASME has calculated the EMFF detected error rate against the sampled costs as a denominator.

This leads to an estimated multiannual residual error rate of 0,72% at the end of 2020, well below the materiality treshold.

EMFF residual error rate remains well below the materiality threshold of 2%.

The residual error rate for EMFF at the end of 2020 is in line with that calculated at the end of 2019. This error rate remains low however as the EMFF auditable population is rather small, one audit with significant error could have a sizeable impact on the detected and residual error rates of the programme.

#### Horizon 2020

The ex-post control for grant management is largely centralised in the Common Implementation Centre, in particular in the Common Audit Service (CAS) for the whole Research and Innovation Family.

For Horizon 2020 the Common Audit Service undertakes all audits (representative and complementary), including those concerning the Executive Agencies and the Joint Undertakings. This is a major step forward in ensuring a harmonised approach and minimising the audit burden on beneficiaries. The Common Audit Service applied this process to the Seventh Framework Programme, in the framework of which, it carried out audits for the DGs funding research grants. When relevant, the Common Audit Service executed audits jointly with the European Court of Auditors.

The main indicators on legality and regularity<sup>57</sup> of EU Framework Programmes for Research and Innovation are:

- Representative detected error rate, based on errors detected by ex-post audits on a Common Representative Sample of cost claims across the Research and Innovation Family of DGs.<sup>58</sup>
- Cumulative residual error rate, which is the extrapolated level of error after corrective measures have been implemented by the Commission services following the audits, accumulated on a multi-annual basis.

Due to its multi-annual nature, the effectiveness of the control strategy of the Research and Innovation Family of DGs can be measured and assessed fully only in the final stages of the EU Framework Programme for Research and Innovation, once the ex-post control strategy has been fully implemented and systematic errors have been detected and corrected.

<sup>&</sup>lt;sup>57</sup> These indicators are described in annex 5.

<sup>&</sup>lt;sup>58</sup> DG AGRI, DEFIS, DG CNECT, DG EAC, EASME, DG MOVE-ENER, ERC, DG GROW, DG HOME, INEA, JRC, REA and DG R&I.

The general objective of this control system are to obtain a cumulative residual error rate within a range of 2-5 % aiming to be as close as possible to 2%, without necessarily expecting it to be lower than 2%.

Progress against these objectives is assessed annually based on the results of the implementation of the ex-post audit strategy and taking into account the frequency and importance of the detected errors along with cost-benefit considerations regarding the effort and resources needed to detect and correct the errors.

In 2020 the Commission re-defined its methodology for calculating the Horizon 2020 error rates in line with the European Court of Auditors' observations in its 2018 and 2019 Annual Reports. The methodology applied is described in annex 5 Materiality criteria.

As of January 2020, the application of the revised methodology on 790 samples resulted in an error rate higher, on average, by 0,41 % in comparison to the error rate calculated by applying the methodology used in the past on the same 790 samples. Consequently, the detected error rate for 2020 calculated according to the methodology used in the past has been corrected by adding 0.41%. This results in the following error rates for Horizon 2020 on 31 December 2020<sup>59</sup>:

- Representative detected error rate: 2,95%<sup>60</sup>
- Cumulative residual error rate for the Research and Innovation Family DGs: 2,16% (2,71% for EASME).

The error rates presented above should be treated with caution. Since not all results of the three Common Representative Samples are available yet, the error rate is not fully representative of the expenditure being controlled. Moreover, the nature of expenditure in the first years of the programme may not be totally representative of the expenditure across the whole period.

Since Horizon 2020 is a multi-annual programme, the error rates, and especially the residual error rate, should be considered within a time perspective. Specifically, the cleansing effect of audits will tend to increase the difference between the representative detected error rate and the cumulative residual error rate, with the latter finishing at a lower value.

As was the case last year, there is evidence that the simplifications introduced in Horizon 2020, along with the ever-increasing experience acquired by the major beneficiaries, affect positively the number and level of errors. However, beneficiaries still make errors,

\_

<sup>&</sup>lt;sup>59</sup> The Horizon 2020 audit campaign started in 2016. At this stage, three Common Representative Samples with a total of 467 expected results have been selected. By the end of 2020, cost claims amounting to EUR 24.3 billion have been submitted by the beneficiaries to the services. The audit coverage for Horizon 2020 is presented in annex 7. In addition to the Common Representative Samples, Common Risk Samples and Additional Samples have also been selected. The total of all samples represents 4 047 participations. The audits of 2 906 participations were finalised by 31/12/2020 (out of which 790 in 2020). This sampling accommodates special needs of certain stakeholders with regard to audit coverage and selection method. In addition, top-ups, which are participations of selected beneficiaries and which are added to the selected participations, are included in the total participations selected.

 $<sup>^{60}</sup>$  Based on the 334 representative results out of the 467 expected in the three Common Representative Samples.

sometimes because they lack a thorough understanding of the rules, sometimes because they do not respect them.

Given the results of the audit campaign up until 2020, and the observations made by the European Court of Auditors in its 2018 and 2019 Annual Reports, the CIC, in close cooperation with DG BUDG, SecGen and the IAS, are defining actions aiming at reducing further the multiannual error rate of Horizon 2020, and paving the way for a simpler and, to the furthest extent possible, an error free Horizon Europe. Actions include further simplification, increased used of simplified forms of funding (including lump sums), focused communication campaigns to more "error-prone" types of beneficiaries with higher than average error rates, such as SMEs and newcomers, and enhanced training to internal project officers and External Audit Firms performing audits on behalf of the Commission. By focusing on the most common errors, these events will be short and simple, reaching more participants and achieving higher impact.

In the context of further reducing the error rates, the CIC will examine the existing tools for ex-ante controls. The CIC will carry out a consultation with the stakeholders in order to collect their views on what improvements should be developed in the grant management risk module or via additional business activity monitoring reports.

It should be noted that although the start of the implementation of these actions will be immediate, their positive effect in the form of reduction in the multiannual error rate may take time to materialise.

In conclusion, DG Research and Innovation considers that the 2020 cumulative residual error rate for Horizon 2020 will fall within the target range established in the Financial Statement, and therefore a reservation is not necessary for the Horizon 2020 expenditure.

#### **Control benefits**

|--|-------|-------------------|-------------------------------|-------|-----------------|-----------------------------|-------|-------|
| Proposals evaluated  | 153   | 342               | 13361                         | 109   | 408             | 586                         | 1629  | 16588 |
| Evaluation review requests received  | 4     | 4                 | 5                             | 3     | 2               | 8                           | 46    | 72    |
| Evaluation review requests leading to a re-evaluation (target <=1)             | 0     | 2                 | 0                             | 0     | 0               | 0                           | 1     | 3     |
| % of evaluation review requests vs proposals evaluated <i>(target &lt; 3%)</i> | 2,61% | 1,17%             | 0,04%                         | 2,75% | 0,49%           | 1,37%                       | 2,82% | 0,4%  |
| % of review requests leading to re-evaluation vs proposals evaluated           | 0,00% | 0,58%             | 0,00%                         | 0,00% | 0,00%           | 0,00%                       | 0,06% | 0,02% |

The benefits of the Stage 1 – programming, evaluation and selection of proposals are not identifiable in quantitative or monetary terms.

In qualitative terms, the benefit of the evaluation and selection stage is the identification of proposals that best address the objectives and priorities of the work programmes which, thanks to their high maturity, have the best chances for successful completion within the eligibility period, and which provide the highest EU added value for the completion of the respective policy targets.

#### Stage 2

The financial impact of the adjustment process is defined as the reduction, expressed as a percentage, of the EC contribution to the grant agreements as a result of the adjustment process itself. Detailed figures are shown below:

| Financial impact of the adjustment process | COSME        | H2020<br>INNO-SUP | H2020<br>EIC Pilot and FTI | EMFF        | H2020 ENERGY | H2020<br>ENVIRONMENT<br>& RESOURCES | LIFE         | TOTAL             |
|--|--------------|-------------------|----------------------------|-------------|--------------|-------------------------------------|--------------|-------------------|
| Number of GA signed                        | 148          | 61                | 298                        | 15          | 78           | 64                                  | 212          | 876               |
| EC funding requested in proposals          | 153300000,00 | 34700000,00       | 606832898,67               | 27773648,61 | 165578646,00 | 508815768,91                        | 460544846,00 | €1.957.545.808,19 |
| EC funding<br>provided in signed GA        | 153300000,00 | 34700000,00       | 593819517,46               | 27741954,47 | 165370205,00 | 506394663,12                        | 438318247,39 | €1.919.644.587,44 |
| Difference EC funding                      | 0,00         | 0,00              | 13013381,21                | 31694,14    | 208441,00    | 2421105,79                          | 22226598,61  | €37.901.220,75    |
| Reduction rate                             | 0,00%        | 0,00%             | 2,14%                      | 0,11%       | 0,13%        | 0,48%                               | 4,83%        | 1,94%             |

Table 4: Control benefit - Stage 2

The adjustment rate varies from 2% to 5%. In the case of H2020 programmes, given that no adjustment phase is foreseen, the difference between the recommended funding and the final awarded grant is rather limited. Contrary to other programmes LIFE still has in place a revision process to follow-up experts evaluation. Within this process applicants are requested, when applicable, to justify and provide more information on some cost items.

As a consequence of the grant preparation phase, a total of EUR 37,9 million was reduced from the awarded funding. This can be considered as a quantifiable benefit of the contracting phase in 2020.

## Stage 3

| Detected errors ex-ante controls           | COSME         | H2020<br>INNO-SUP | H2020<br>EIC Pilot and FTI | EMFF          | H2020<br>ENERGY | H2020<br>ENV & RESOURCES | LIFE           | TOTAL          |
|--|---------------|-------------------|----------------------------|---------------|-----------------|--------------------------|----------------|----------------|
| value of cost claims<br>controlled ex-ante | 71.622.780,77 | 29.917.122,99     | 527.782.448,93             | 14.123.019,08 | 72.976.003,25   | 277.674.476,62           | 121.156.001,61 | €1.115.251.853 |
| value rejected costs                       | 1.478.077,11  | 253.509,19        | 44.106.379,72              | 1.881.112,19  | 4.955.512,39    | 11.464.941,38            | 8.104.285,42   | €72.243.817    |
| % detected errors ex-ante controls         | 2,06%         | 0,85%             | 8,36%                      | 13,32%        | 6,79%           | 4,13%                    | 6,69%          | 6,48%          |

Table 5: Control benefit - Stage 3

The ex-ante controls aim to identify and prevent irregularities, allowing for immediate correction and avoid time-consuming recovery actions. As can be concluded from the table, the ex-ante controls result in a considerable amount of detected errors and rejected costs in the cost claims submitted by the beneficiaries for a total value of more than EUR 72 million. This can be considered as a quantifiable benefit of the monitoring phase in 2020.

The benefits of ex-ante control stages 2 and 3 are quantified by the reduction of funds EASME\_aar\_2020\_annexes\_final Page 101 of 126 awarded during the contracting procedure, equal to EUR 110 millions.

## **Control benefits (Stage 4)**

The benefits of Stage 4 – ex-post controls correspond to the detected errors, which amount to EUR 1,11 million for the programmes audited by EASME (COSME, LIFE, EMFF).

In addition, there are a number of qualitative benefits resulting from ex post controls:

- Ex-post controls have a deterrent and learning effect for beneficiaries, helping to reduce errors in future cost declarations.
- It enhances the beneficiaries' discipline for correctly reporting eligible costs by demonstrating that their probability to be audited is not negligible.
- It also contributes to the improvement of ex-ante controls and clarification of rules and guidance by feeding back results and findings from ex-post audits.

As regards Horizon 2020, the audits are performed by the Common Audit Service. Please refer to DG R&I AAR for more details.

Table 9: Audit overview per programme audited by EASME

At the beginning of 2020, EASME had 57 on-going reports launched in 2018 and 2019 related to audit assignments outsourced to external audit firms.

By end of 2020, EASME has issued 54 final audits reports, one report is under contradictory procedure and two audit assignments were cancelled.

During the year, 36 new audits were launched related to EMFF, LIFE and COSME programmes. By the end of 2020, three reports are under quality review, 29 reports are to be issued by the external contractor and for three audit assignments, the fieldwork is due to take place in early 2021. In addition, the Agency launched a joint audit with the Common Audit Service on a beneficiary for which fieldwork is currently ongoing.

EASME implemented all the necessary actions in order to reduce the impact of the Covid-19 pandemic and related travel limitations, on the ex post activity and to ensure a proper completion of the audit work under these circumstances, as follows:

- Close monitoring of the work done by the external audit firms, through audit reports quality reviews and regular meetings with the external audit firms;
- Formalising the possibility for external audit firms to perform desk review audits when on-site visits could not take place due to travel and health restrictions, in line with the auditing standards and in duly justified cases.

However, it should be noted that fieldwork of the audits issued in 2020 took place in 2019, before the Covid-19 pandemic related travel restrictions. As a result, the conduct of these

audits were not hindered by the Covid-19 pandemic and could take place at beneficiaries' premises.

For **COSME**, the Agency closed the remaining seven audits related to the second audit campaign. In addition, out of the 36 audits contracted in 2019 relating to the third audit campaign, 33 are now closed, one audit is under contradictory procedure and two audits were cancelled, of which one is due to health and travel restrictions related to the Covid-19 pandemic, preventing the auditors from organising fieldwork at the beneficiary's premises in Japan.

The Agency launched a new batch of audits in July 2020. Out of the six audits contracted, five reports are to be submitted by the contractor. For one assignment the fieldwork/desk review is due to take place in early 2021. The related results are expected in 2021.

As regards **EMFF**, the first audit campaign was launched in 2019. Out of the ten audits contracted, they are all closed by year-end. In March 2020, the Agency launched a batch of 12 audits, representing the second audit campaign. As of 31 December, nine reports are to be submitted by the contractor, two are under quality review and for one assignment the foeldwork/desk review is due to take place in early 2021. The related results are expected in 2021.

On **LIFE**, the Agency closed the remaining audit launched in 2018 and the nine audits launched in 2019. In addition, in March 2020, the Agency launched two new batches, including five audits on LIFE Operating audits and 12 on LIFE Action grants. At year end, 15 reports have still to be submitted by the contractor, one is under quality review and for one assignment the fieldwork/desk review is due to take place in early 2021. The related results are expected in 2021.

In addition, one joint audit, performed with the Common Audit Service of DG RTD, was launched with in house resources and the fieldwork is currently ongoing.

For **Horizon 2020**, since 2007, the Research Family of DGs and Executive Agencies have adopted a common audit strategy intended to ensure the legality and regularity of expenditure on a multi-annual basis, including detection and correction of systematic errors. The overall target in the Common Horizon 2020 Audit Strategy for 2020 is 838 audited participations. By the end of 2020, the audits of 790 participations were closed, achieving a completion rate of 94%.

As a result of the COVID-19 pandemic and related travel limitations, the Common Audit Service (CAS) – in line with the instructions of the Commission – had to postpone on-the-spot missions. To minimise the impact of COVID-19 pandemic on the implementation of the audit campaign, the CAS converted traditional in-house audit assignments into desk audits, in line with international best practice and auditing standards. Regarding outsourced audits, the CAS instructed the audit firms to perform remotely the maximum possible amount of audit tests while complementing those with on-the-spot audit missions once travel restrictions were eased.

Despite travel restrictions, and other objective challenges due to the pandemic, the CAS reached the result of finalising audits on 790 participations corresponding to the 94% of the planned target.

## • Implementation of audit results

| Implementation of audit results excluding targeted audits (ex-post controls 2014-2020) | COSME    | LIFE    | EMFF    | TOTAL      |
|--|----------|---------|---------|------------|
| % of value-audits results implemented over detected errors                             | 78,37%   | 100,00% | 100,00% | 79,27%     |
| detected error amount  | 961.769€ | 41.657€ | 20.951€ | 1.003.426€ |
| errors corrected (before 31.12.2020)   | 753.780€ | 41.657€ | 20.951€ | 795.437€   |

Table 10: Status of implementation of audit results managed by EASME.

There is a time lag between the start of the project, the payments, audits performed and recoveries made. Projects managed by the Agency are multiannual and involve payments at different stages.

For the legacy programmes, LIFE and EMFF, the audits were mainly carried out after the final payments. Corrections are then implemented timely, issuing recovery orders<sup>61</sup>. In COSME, there were a number of audits related to interim payments. For these, corrections are implemented by offsetting against another future payment. As payments are usually made at 18-24 month intervals, there will often be a considerable time lag between the identification of an error and the effective correction. Given the pattern of payments, this does not represent a specific risk to the EU financial interests.

By the end of 2020, on a cumulative basis from the beginning of each programme, from detected errors in value-based audits, on average, 79,27% is recovered. The remaining 20.73% is mainly linked to final audit reports which were closed near the year-end, for which the implementation of audit findings is expected to be issued in 2021.

#### Section 2.1.2 Audit observations and recommendations. Additional information.

Details of IAS and ECA audits are detailed in the tables below

<sup>&</sup>lt;sup>61</sup> In case of a bankruptcy, in order to protect as much as possible the financial interests of the EU, the recovery order is issued immediately after the closure of the audit. This is to ensure, to the maximum extent possible, that the debt is registered before the bankruptcy decision is declared by the Court.

| RESULTS IAS audits 2020  |  |  |  |  |  |  |  |
|--|--|--|--|--|--|--|--|
| IAS audit  | Status and results   | Responsible Unit   |  |  |  |  |  |
| LIFE project management and ex-ante controls  IAS final report from 3 October 2019.  EASME action plan issued on 23 October 2019 | ACTION PLAN with 1 very important and 2 important audit recommendations implemented. Closed by the IAS in March 2021.  1) Very important: To improve the planning and design of control activities and reporting on the cost-effectiveness of controls 2) Important: To monitor the access rights in the Butler IT tool 3) Important: To further develop the LIFE procedure on the monitoring of the external contractor and to improve the monitoring of KPI's.  Actions were timely implemented in 2020 (resp. on 15/12, 29/04 and 29/06) and not exceeding a delay of 6 months.   | B3 and C.1.7   |  |  |  |  |  |
| H2020 project management in EASME  IAS final report from 25 January 2018.  EASME action plan issued 23 February 2018.            | ACTION PLAN with 1 important audit recommendations considered as implemented. Closed by the IAS in March 2021.  1) Important: Pending the roll-out of the planned plagiarism detection tool, to provide clear guidance to the POs on the cost-effective checks to be performed in order to ensure effective plagiarism checks and a consistent and harmonised approach across the different units.  Action implemented in October 2019.  | H2020 units A1, A2,<br>B1, B2  |  |  |  |  |  |
| Management of experts in Horizon 2020 grants<br>(EASME, RTD, CONNECT, REA, INEA)   | FINAL audit report issued in December 2020 (Ares(2020)7576617 and Ares(2020)5339855). Action plan issued in February 2021 and aligned with CIC action plan where applicable (Ares(2021)1497845).  1) EASME individual audit report: one minor "issue for consideration", related to two monitor payments. (daily allowance paid to an expert for 2 days instead of 1.5 day, and a rejection of costs for about 50 EUR for which the explanations are not visible in the expert portal)  2) Corporate audit report (mainly adressed to RTD/ CIC and REA) Six important audit findings and 2 very important audit findings, related to (i) the monitoring of participation patterns of independent experts and respect of the rotation rules and (ii) processing of experts personal data.  For one "important" audit finding, on the termination of expert contracts and related payments, all H2020 implementing bodies, including EASME are associated together with REA to address the audit recommendation, namely to analyse all cases with an undeclared Col, and to define which actions should be undertaken (e.g. rejection of fees, flagging in EDES);  | 1) B1/C.1.4  2) For audit finding n°7: all H2020 entities with REA. Other findings: centrally handled by RTD/CIC with support of H2020 implementing bodies   |  |  |  |  |  |
| Implementation of anti-fraud actions in the research area (EASME, RTD, CONNECT, REA, INEA, ERCEA)                                | FINAL audit report issued on 27 January 2021(Ares(2021)672610). Action plan issued in February 2021(Ares(2021)1400187) and aligned with CIC action plan where applicable.  1) EASME individual audit report: two important recommendations: (i) To assess the effectiveness of its procedure for the notification of cases to OLAF in the light of criteria to be defined by the CIC and OLAF, and to include a visible link for the fraud notification system on its public website (ii) To effectively use the reinforced monitoring tool for cases under OLAF's investigation in line with the guidance on H2020 ex ante controls, to reflect additional measures in the risk management module and to timely implement the OLAF's recommendations to initiate the EDES procedure.  2) Corporate audit report (adressed to RTD/ CIC with the support of the implementing bodies): five important recommendations The two important recommendations above are also reflected in the corporate report for all implementing bodies. Three other important recommendations addressed to CIC with the support of the research bodies are: (i) to further develop guidance on anti-fraud controls, adopt a common anti-fraud training with sufficient coverage of the anti-plagiarism tools and monitor the usage of SIMBA; (ii) to identify common indicators to monitor the Research Anti-Fraud Strategy; (iii) to update the research family's risk assessment for fraud risks within the FAIR and to ensure implementing bodies provide information to CAS on ongoing OLAF investigations | 1(i) C.02 and EASME<br>Anti-Fraud Committee<br>1(ii) All EASME<br>H2020 financial and<br>operational sectors<br>2) Centrally handled<br>by RTD/CIC with<br>support of research<br>implementing bodies<br>(ao through FAIR) |  |  |  |  |  |

| Reference (incl. clearing letter n*) Parent DG                       |      | Error  | Results   | Responsible<br>Unit | Corrective action<br>implemented?   |
|--|------|--------|---|---------------------|---|
| H2020 SMEI - BEVSTREAM<br>CL 9869 (Sept 2019)                        | RTD  | 0,00%  | No audit findings   | A2/C.1.2            | N/A   |
| H2020 SC5 - CRESCENDO<br>CL 9870 (July 2019)                         | RTD  | 0,00%  | No audit findings   | B2/C.1.3            | N/A   |
| H2020 SC5 - SUBSOL<br>CL 9888/1 (Sept 2019) and<br>9868/2 (Jan 2020) | RTD  | 0,00%  | ECA audit accompanied by the CAS. CAS and EASME agreed with ECA findings.  1) first finding on 19.09.19; no quantified error rate, but procurement error: -no assessment of cross-border interest as requested by Danish law (only contact of Danish contractors); -no comprehensive set of documentation related to the procurement process; - error could have been detected by the "independent" auditors.  (On the other hand, ECA mentions that beneficiary has paid attention to achieving best value for money through several negotiation rounds leading to a lower final price).  2) second finding on 29.01.20: no quantified error rate; incorrect conversion of costs incurred in a foreign currency (with immaterial impact) | B2/C.13             | No financial action (recovery) to undertake for the <u>ECA audit</u> .  As regards the <u>CAS audit report</u> .  B2/C.1.3 follows the usual process implementation of the agreed CAS audit findings after the contradictor process;  B2/C.1.3 to remind beneficiary of correct application of procurement and conversion rules |
| COSME EEN / ITT (procurement)-<br>CL 9853 (July 2019)                | GROW | 0,00%  | No audit findings   | A1 / C.1.5          | N/A   |
| H2020 WATER - REGROUND<br>CL 9872 (Dec 2019)                         | RTD  | 0,00%  | ECA audit accompanied by the CAS.  No quantified error rate. Delay of transfer of EU funds from Coordinator.  | B2/C.1.3            | As regards the CAS audit report,<br>B2/C.1.3 follows the usual process<br>implementation of the agreed CAS<br>audit findings after the contradictor<br>process.   |
| H2020 - BAMB - WASTE -2014 -<br>CL 10042 (April 2020)                | RTD  | 0,00%  | No quantified error rate.  The beneficiary used the 2017 annual personnel costs instead of the 2018 (closed) data. No financial impact  | B2 / C.1.3          | B2/C.1.3 to remind beneficiary of<br>correct application of personnel<br>costs rules  |
| H2020 SMEI - HOT CHIPS<br>CL 10043 (April 2020)                      | RTD  | 16,70% | 1) Ineligible personnel costs and exchange rate issues - error rate 16,68%: consultancy costs declared as personnel costs instead of subcontracting, for a former employee. No evidence of subcontracting and best value for money. (not detectable by Commission) 2) Incorrect classification of costs - error rate 0,86% (not detectable by Commission) 3) Unsigned financial statement (detectable by Commission)  EASME agreed with the first 2 findings, resulting in ineligible costs, and disagreed with the 3th finding related to the "unsigned financial statement". The ECA agreed to drop the 3th finding. Resulting in total of ineligible costs of about 156 000 EUR for the interim payment.                               | A2/C.12             | Offsetting of ineligible costs at fina payment (in April 2022) (C.1.2)  |
| H2020 SMEI - SPARTERS<br>CL 10044 (July 2020)                        | RTD  | 0,39%  | low error rate of 0,39% (about 7 700 EUR) on interim payment, two SME owners charged management fees under "goods and services" instead of under personnel costs (considered by the ECA as a "detectable" error by the Commission);     2) Hourly rate calculation deficiency (pension contributions affecting the hourly rate calculation, and hours not declared by the beneficiary). Overall financial impact is in favour of the beneficiary, therefore no "error rate" identified by the ECA (not detectable by the Commission).   | A2/C12              | Offsetting of ineligible costs at fina<br>payment (in November 2020)<br>(C.1.2)   |
| COSME -COSME/2018/033 Blueprint<br>CL 11396 (July 2020)              | GROW | 0,00%  | No audit findings   | A1 / C.1.5          | N/A   |

## I. ECA audit results - operational budget - Statement of Assurance 2020 - follow up

## Results EASME DAS 2020 (9 transactions sampled, 2 audit results available in 2021, 7 audits still ongoing)

| Reference (incl. clearing letter n°)       | Parent<br>DG | Error rate | Results  | Responsible<br>Unit | Corrective action implemented?                      |
|--|--------------|------------|--|---------------------|---|
| LIFE MULTIBOSOL                            | ENV          | -          | Audit ongoing  | B3/C.1.7            | -   |
| H2020 URBANREC                             | RTD          | 1          | Audit ongoing  | B2 / C.1.3          | -   |
| H2020 SMEI COLOFAST<br>CL 12237 (Dec 2020) | RTD          | 0,00%      | No audit findings  | A2 / C.1.2          | N/A   |
| H2020 SMEI FIVE G                          | RTD          | -          | Audit ongoing  | A2 / C.1.2          | -   |
| H2020 EIC ENHANCEPLAYER                    | RTD          | -          | Audit ongoing  | A2 / C.1.2          | -   |
| H2020 EDGE<br>CL 12291 (Jan 2021)          | RTD          | 0.00%      | No quantified error rate The ECA did not quantify an error rate as the financial impact is below the materiality threshold. In the second reporting period, the beneficiary added positive adjustments to the staff costs for the first reporting period, by applying the hourly rate based on the 2018 year which was in the meanwhile closed. The impact is minor. | B2 / C.1.3          | N/A - final payment done in the past, grant closed. |
| H2020 DRIMPAC                              | ENER         | -          | Audit ongoing  | B1/ C.1.4           |   |

<sup>\*</sup> related funds managed/concerned = payments made, revenues and/or other significant non-spending items such as e.g. assets, liabilities, etc

<sup>\*\*</sup> ratio possibly "Not Applicable (N/A)", e.g. if a RCS specifically covers an Internal Control Objective such as safeguarding sensitive information, reliable accounting/reporting, etc; or if control costs are not attributable to a single RCS and may relate to a 'mix' of expenditure, revenue, assets/liabilities, etc

<sup>\*\*\*</sup> any 'holistic' control elements (e.g. with 'combined' ex-ante & ex-post characteristics) can be mentioned in the total column (without being in either one of the ex-ante or ex-post columns), provided that a footnote clarifies this (their nature + their cost). Example: MS system audits in shared management.

# ANNEX 8: Specific annexes related to "Assessment of the effectiveness of the internal control systems"

### Internal Control self-assessment

| Main outputs in   | Main outputs in 2020                       |  |   |  |  |  |  |
|---|--|--|---|--|--|--|--|
| Output  | Indicator                                  | Target   | Result  |  |  |  |  |
| Timely and qualitative analysis of annual Internal control effectiveness assessment | Review of the status of the control system | Weak and/or inefficient control systems are reviewed and measures for next year are identified | Analysis of the results of the Internal Control survey contributed with qualitative analysis and demonstrated that the controls in place are working in the overall effectively (81% of management and 80% of staff answered positively in the survey).  The main challenges (<74%) were identified within the Internal Control components (ICC) 3 and 4.  The process owners of each internal control component and ICP were provided with the results defining perceived strengths and weaknesses and with their involvement the Action plan for 2021 was prepared, specifying the measures addressing the identified weaknesses.  Based on the other assessment exercises (risk assessment; results of reporting on exceptions and non-compliances, etc) the IC team |  |  |  |  |

<sup>-</sup> Not including 5 contract agent posts financed from appropriations accruing from contributions from external revenues to cover the frontload supported by the Agency since 2014. The Agency received associated country contributions (RO-credits) from H2020 Programme but these activities were carried out without any additional human resources until 2018.

- In agreement with DG ENER and in line with the guidelines for the establishment and operation of executive agencies financed from the Union budget - one seconded official post has been filled by engaging an AT2f temporary member of staff.

Four joint procedures with other Executive Agencies ran in 2020, for three of them EASME was the leading Agency providing coordination, expertise and guidance.   |
| Development of<br>new employer<br>branding<br>strategy           | <ul> <li>New employer branding strategy is developed</li> <li>HR presence at corporate events is planned</li> <li>Updated EASME career website</li> </ul>                   | New employer branding strategy was adopted and communicated in Q2 HR participated in 3 (corporate and HR) events in 2020 HR launched branding campaign on EASME website in 2020 | All actions had to be postponed due to Covid-19 pandemic and the need to deploy resources in recruitment and on-boarding activities.   |
| EASME has a modern and attractive office space for all its staff | <ul> <li>modern and attractive office space</li> <li>well equipped, meetings rooms</li> <li>social corners</li> <li>special room for interviews and candidates</li> </ul>   | By Q4 all staff in EASME has modern and attractive office space, all special rooms are created and equipped   | All staff has a modern and attractive ergonomic office space. There are social corners on every floor and a dedicated interview and waiting room on the 12th floor.  The Covid 19 pandemic delayed the refurbishment and equipment of meeting rooms, but EASME launched a first study, using the corporate SCIC framework contract, before the end of the year.  EASME put on hold the hub project on the twelfth floor because of the Covid 19 pandemic and the upcoming reorganisation of the Executive Agencies. EASME reallocated budget to the purchase of furniture for hybrid collaborative |

| Implement the actions for a fair and caring workplace | Trainings delivered to support the actions  | Trainings on anti-burnout (4 in the year) 2 training on ethics and integrity (1 managers, 1 staff) | spaces, which was delivered at the end of 2020.  Amid the Covid 19 pandemic, EASME also took measures to ensure wellbeing of colleagues working from home (refund of ergonomic equipment, training and psychosocial support), in line with corporate decisions.  Anti-burnout training with support from Medical service had to be cancelled last minute due to the unavailability of the presenter. External trainers delivered 2 sessions for staff and managers.  Training on ethics & integrity had to be cancelled as the trainer and contractor could not deliver the training online. They are now organised on-line following the guidelines/programmes of DG HR. Additional information about ethics has been provided to all staff.  Anti-fraud training in collaboration with OLAF was delivered to all newcomers and staff. |
|---|---|--|---|
| Women<br>Empowerment<br>programme                     | Dedicated actions to create a women empowerment culture are implemented and reported to EASME Management            | Q1   | The Women Talent Programme was run successfully with 12 participants. The closing event was organised alongside a Ted-style talk event on female leadership.  |
| Programme of continuous feedback to staff             | The results of the EASME programme for continuous feedback to staff are available and shared with EASME Management. | Programme<br>approved in Q2<br>and deployed in<br>Q3   | Postponed due to Covid 19 pandemic  |
| Management<br>training<br>programme                   | Training sessions, lunchtime conferences, discussion tables, thematic groups, management workshops                  | Throughout the year  | Planned training sessions were held online. The HoU club continued to run online. The Managerial Excellence programme 2020 was delivered at 50% as the Covid-19 situation caused delays. A seminar on   |

 $<sup>^{71}</sup>$  Each registered document must be filed in at least one official file of the *Chef de file*, as required by the <u>e-Domec policy rules</u> (and by ICS 11 requirements). The indicator is to be measured via reporting tools available in Ares.

<sup>&</sup>lt;sup>72</sup> Suite of tools designed to implement the <u>e-Domec policy rules</u>.

<sup>&</sup>lt;sup>73</sup> The Agency is a separate legal entity and has legal constraints - linked to data protection policy - in sharing files with other external entities, including EC services. In the WP 2020, EASME envisaged to open its H2020 project-related ARES documents to all "*Research family*", including partner DGs and EAs. In light of the above, validation and experts contracts were excluded and this led to a target of 20-25% of EASME documents that could be with other COM Services. Following consultation with the SG, in 2020 EASME had also foreseen to request the approval to the EC legal services to be part of the "ARES group Commission". This would have allowed also EASME to benefit of the ARES feature "share the document with other EC services", further increasing the Agency 20-25% indicator of shared documents. Because of the Covid 19 pandemic, and of the new MFF - implying the redistribution of portfolios among EAs - the actions mentioned above could not be fully implemented and the indicator set for 2020 could not be achieved.
